The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/569,967

Applicant(s)

GOU ET AL

Examiner

CAMERON J. ALLEN

Art Unit

1797

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 February 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 27 February 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/5508)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Scott US 5,951,456.

Regarding claim 1, Scott discloses a method for demulsifying water-oil emulsions (Column 8 line 20) through ultrasonic action (Column 7 line 18-24), comprising a step of making water-oil emulsions flow through at least one ultrasonic acting region in a flow direction (Figure 2 section 15 direction 4)(Column 3 line 49), characterized in that: within said ultrasonic acting region (Figure 2 region 15), a concurrent ultrasonic wave whose traveling direction is the same as the flow direction of said water-oil emulsions is generated by at least one first ultrasonic transducer (Figure 2 transducer 21) provided at the upstream end of said ultrasonic acting region, and at same time, a countercurrent ultrasonic wave whose traveling direction is opposite to the flow direction of said water-oil emulsions; and the concurrent ultrasonic wave and the countercurrent ultrasonic wave act simultaneously on the water-oil emulsions flowing through said ultrasonic acting region (Figure 2 wave produced by reflector 50), so as to demulsify said water-oil emulsions but does not disclose the countercurrent wave is generated by at least one second ultrasonic transducer provided at the downstream end of said ultrasonic acting region. Scott does disclose a reflector opposite the first transducer that creates a countercurrent wave that acts simultaneously on the water oil emulsion. It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the reflector plate with a second transducer, since it is within the ordinary skill in the art to use a known device such as a second transducer that provides the same result as the reflector.

Regarding claim 2, Scott discloses the method according to Claim 1, characterized in that, the orientation of the central axis of said ultrasonic acting region is

identical with said flowing direction in which said water-oil emulsions flow through said ultrasonic acting region. (Figure 2 Transducer 21 direction 4 region 15)

Regarding claim 3, Scott discloses the method according to Claim 1, characterized in that, said concurrent ultrasonic wave and the countercurrent ultrasonic wave travel with uniform sound intensity within said ultrasonic acting region; the sound intensity of said countercurrent ultrasonic wave is no lower than that of said concurrent ultrasonic wave. (Column 5 line 55) The examiner interprets this to be inherent to the transducer producing constant cycles per second. (Column 5 line 35-44)

Regarding claim 4, Scott discloses the method according to Claim 1, characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.8\text{W}/\text{cm}^2$. Scott discloses the claimed invention except for wave is no higher than $0.8\text{W}/\text{cm}^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.8\text{W}/\text{cm}^2$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 5, Scott discloses the method according to Claim 4, characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.5\text{W}/\text{cm}^2$. Scott discloses the claimed invention except for wave is no higher than $0.5\text{W}/\text{cm}^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.5\text{W}/\text{cm}^2$, since it has been held that where the general conditions of a claim

are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 6, Scott discloses a demulsifying device for implementing the method according to Claim 1, the demulsifying device comprising at least one ultrasonic acting region (Figure 2 section above 15) in which water-oil emulsions flow (Column 8 line 20), characterized in that, at the upstream end of said ultrasonic acting region there is mounted the first ultrasonic transducer (Figure 2 transducer 21) for generating a concurrent ultrasonic wave whose traveling direction (Figure 2 direction 4) is the same as the flow direction of said water-oil emulsions, and at the downstream end of said ultrasonic acting region there is mounted the reflecting surface (Figure 2 50) of the ultrasonic transducer for generating a countercurrent ultrasonic wave whose traveling direction is opposite to the flow direction of said water-oil emulsions; and a ultrasonic generator is connected with said first transducers via ultrasonic power lines, so as to drive said first ultrasonic transducers to generate said concurrent ultrasonic wave and said countercurrent ultrasonic wave (Figure 5 generator 60 and 65 and transducer 18 and 21)(Column 5 line 30-35), but does not disclose at the downstream end of said ultrasonic acting region there is mounted the second ultrasonic transducer. Scott does disclose a reflector opposite the first transducer that creates a countercurrent wave that acts simultaneously on the water oil emulsion. It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the reflector plate with a second transducer, since it is within the ordinary skill in the art to use a known device such as a second transducer that provides the same result as the reflector.

Regarding claim 7, Scott discloses the demulsifying device according to Claim 6, and is connected with other water-oil emulsion pipes in production and processing line (Figure 2 27 Column 2 line 67) but does not disclose said ultrasonic acting region is of a pipe structure. Scott does disclose that the region is a channel. (Figure 2 11) It would have been obvious to one of ordinary skill in the art at the time of the invention to use a pipe instead of a channel, since a pipe is an art recognized equivalent and it is within the ordinary skill in the art to substitute art equivalents.

Regarding claim 8, Scott discloses the demulsifying device according to Claim 7, but does not disclose that, said ultrasonic acting region is of a pipe structure with a constant diameter. Scott does disclose that the region is a channel of constant diameter. (Figure 2 11) It would have been obvious to one of ordinary skill in the art at the time of the invention to use a pipe instead of a channel, since a pipe is an art recognized equivalent and it is within the ordinary skill in the art to substitute art equivalents.

Regarding claim 9, Scott discloses the demulsifying device according to Claim 7, but does not disclose that, said ultrasonic acting region is of a pipe structure with a varying diameter. Scott does disclose the region is constant. It would have been obvious to one of ordinary skill in the art at the time of the invention to vary the diameter of the pipe since it as been held that mere changes in size or shape are not patentably distinct if it would not perform differently than the prior art, the claimed device was not patentably distinct from the prior art device. *MPEP 2144.04*

Regarding claim 10, Scott discloses the method according to Claim 2,

characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.8\text{W}/\text{cm}^2$. Scott discloses the claimed invention except for wave is no higher than $0.8\text{W}/\text{cm}^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.8\text{W}/\text{cm}^2$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 11, Scott discloses the method according to Claim 3, characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.8\text{W}/\text{cm}^2$. Scott discloses the claimed invention except for wave is no higher than $0.8\text{W}/\text{cm}^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.8\text{W}/\text{cm}^2$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 12, Scott discloses the method according to Claim 10, characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.5\text{W}/\text{cm}^2$. Scott discloses the claimed invention except for wave is no higher than $0.5\text{W}/\text{cm}^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.5\text{W}/\text{cm}^2$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges

involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 13, Scott discloses the method according to Claim 11, characterized in that, the sound intensity of said countercurrent ultrasonic wave is no higher than $0.5W/cm^2$. Scott discloses the claimed invention except for wave is no higher than $0.5W/cm^2$. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the wave no higher than $0.5W/cm^2$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,818,128 B2, US 6,216,538 B1.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CAMERON J. ALLEN whose telephone number is (571)270-3164. The examiner can normally be reached on M-Th 9-7pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Walter Griffin can be reached on 571-272-1447. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
